QUESTION: CHALLENGING PROBLEM 1

Let X be a random variable such that $E(X) = E(X^2) = 1$. Then $E(X^{100}) = ?$

- (A) 0
- (B) 1
- (C) 2^{100}
- (D) $2^{100} + 1$

SOLUTION

$$\rho^2 = E[X^2] - E[X]^2 \quad (0.0.1)$$

$$= 1 - 1^2 \quad (0.0.2)$$

$$= 0 \quad (0.0.3)$$

$\therefore X$ is constant and equal to 1 Thus we can conclude that

$$E[X^{100}] = \sum X \Pr(X) \quad (0.0.4)$$

$$= 1 \quad (0.0.5)$$

Solution: Option B
