QUESTION: CSIR UGC NET EXAM (JUNE 2013), Q.101

Let  $X_1, X_2,...$  be independent random variables each following exponential distribution with mean 1. Then which of the following statements are correct?

- 1)  $P(X_n > \log n \text{ for infinitely many } n \ge 1) = 1$
- 2)  $P(X_n > 2 \text{ for infinitely many } n \ge 1) = 1$
- 3)  $P(X_n > \frac{1}{2} \text{ for infinitely many } n \ge 1) = 0$
- 4)  $P(X_n > \log n, X_{n+1} > \log(n+1)$  for infinitely many  $n \ge 1$  = 0

#### Solution

PDF of  $X_i$  is

$$f_{X_i}(x) = \begin{cases} \lambda_i e^{-\lambda_i x}, & x \ge 0\\ 0, & x < 0 \end{cases}$$

Mean of  $X_i$  is expressed as

$$E[X_i] = \int_{-\infty}^{\infty} x f_{X_i}(x) dx$$

$$= \int_{-\infty}^{0} 0 dx + \int_{0}^{\infty} x \lambda_i e^{-\lambda_i x}$$

$$= \frac{1}{\lambda_i}$$
(0.0.1)

From (0.0.1)and  $E[X_i] = 1$ , we have  $\lambda_i = 1 \forall i \ge 1$ Now, for some constant  $c \ge 0$ 

$$\Pr(X_n > c) = \int_{c}^{\infty} f_{X_n}(x) dx$$
$$= \int_{c}^{\infty} e^{-x} dx$$
$$= e^{-c}$$
(0.0.2)

#### **Borel-Cantelli Lemma:**

Let  $E_1, E_2,...$  be a sequence of events in some probability space. The Borel–Cantelli lemma states that, if the sum of the probabilities of the events  $E_n$  is finite

$$\sum_{n=1}^{\infty} \Pr(E_n) < \infty \tag{0.0.3}$$

then the probability that infinitely many of them occur is 0

$$\Pr\left(\lim_{n\to\infty}\sup E_n\right) = 0\tag{0.0.4}$$

## **Second Borel-Cantelli Lemma**:

If the events  $E_n$  are independent and the sum of the probabilities of the  $E_n$  diverges to infinity, then the probability that infinitely many of them occur is 1. If for independent events  $E_1, E_2, ...$ 

$$\sum_{n=1}^{\infty} \Pr(E_n) = \infty \tag{0.0.5}$$

Then

$$\Pr\left(\lim_{n\to\infty}\sup E_n\right) = 1\tag{0.0.6}$$

1) **Option 1:** We can say the events  $X_n > \log n$  are independent  $\forall n \geq 1$  as  $X_n$  are independent random variable.

From (0.0.2)

$$\sum_{n=1}^{\infty} \Pr(X_n > \log n) = \sum_{n=1}^{\infty} e^{-\log n}$$

$$= \sum_{n=1}^{\infty} \frac{1}{n}$$

$$= \infty \text{ (Cauchy's Criterion)}$$

Now, from second Borel-Cantelli lemma

$$\Pr(X_n > \log n \text{ for infinitely many } n \ge 1)$$
  
=  $\Pr\left(\lim_{n \to \infty} \sup X_n > \log n\right)$   
= 1

- .. Option 1 is correct.
- 2) **Option 2:** We can say the events  $X_n > 2$  are independent  $\forall n \geq 1$  as  $X_n$  are independent random variable. From (0.0.2)

$$\sum_{n=1}^{\infty} \Pr(X_n > 2) = \sum_{n=1}^{\infty} e^{-2}$$
$$= \infty$$

Now, from second Borel-Cantelli lemma

$$\Pr(X_n > 2 \text{ for infinitely many } n \ge 1)$$
  
=  $\Pr\left(\lim_{n \to \infty} \sup X_n > 2\right)$   
= 1

- :. Option 2 is correct.
- 3) **Option 3:** We can say the events  $X_n > \frac{1}{2}$  are independent  $\forall n \geq 1$  as  $X_n$  are independent random variable.

From (0.0.2)

$$\sum_{n=1}^{\infty} \Pr\left(X_n > \frac{1}{2}\right) = \sum_{n=1}^{\infty} e^{-\frac{1}{2}}$$

Now, from second Borel-Cantelli lemma

$$\Pr\left(X_n > \frac{1}{2} \text{ for infinitely many } n \ge 1\right)$$
$$= \Pr\left(\lim_{n \to \infty} \sup X_n > \frac{1}{2}\right)$$

- .. Option 3 is incorrect.
- 4) **Option 4:** We can say the events  $X_n > \log n$  are independent  $\forall n \geq 1$  as  $X_n$  are independent random variable.

Let the event  $X_n > \log n, X_{n+1} > \log(n+1)$  be represented by  $E_n$ '

From (0.0.2)

$$\sum_{n=1}^{\infty} \Pr(E_n)$$

$$= \sum_{n=1}^{\infty} \Pr(X_n > \log n) \Pr(X_{n+1} > \log(n+1))$$

$$= \sum_{n=1}^{\infty} e^{-\log n} e^{-\log(n+1)}$$

$$= \sum_{n=1}^{\infty} \frac{1}{n(n+1)}$$

$$= \sum_{n=1}^{\infty} \frac{1}{n} - \frac{1}{n+1}$$

$$= 1 \qquad (0.0.7)$$

Now, from Borel-Cantelli lemma

Pr 
$$(E_n \text{ for infinitely many } n \ge 1)$$
  
= Pr  $\left(\lim_{n\to\infty} \sup(X_n > \log n, X_{n+1} > \log(n+1))\right)$   
= 0

.. Option 4 is correct.

**Solution:** Options 1, 2, 4
